RE: Woodleaf Park (17000518.00) Proposal Amendment (P2317071.00)
Additional Services for Geotechnical Services

Dear Mr. Church:

As per discussion at the Parks & Recreation Advisory Board meeting on 8/30, we recommend the County obtain some geotechnical information about the core area of the future Woodleaf Park site. The Board was in agreement. We would like to better understand depth to rock (that we understand to be shallow in several locations within the park) and type of rock to assist with finalizing our grading, drainage, and utility design.

SCOPE OF SERVICES

For this task, our subconsultant, ECS, anticipates providing the following services to evaluate the depth to and rippability of the subsurface soils.

Task #1 – Limited Subsurface Exploration

ECS proposes to provide one-half (1/2) day (up to 4 hours) of an ECS staff professional to observe and log the test pits (3+) during excavation. ECS will provide the excavation equipment and the operator. The test pit excavations will be backfilled with the excavated soil materials prior to our demobilization from the site. Additionally, one (1) bulk soil sample will be obtained for laboratory testing consisting of one (1) moisture content, one (1) percent fines test, and one (1) Atterberg limits test. Due to the existing development, the use of a private utility locator has been included in our lump sum fee. Our observations will be presented in a data report including test pit logs within 2 weeks of completion of the field work.

COMPENSATION

Based on the above scope of services, we have established a lump sum fee of \$5,225.

If you find this proposal amendment to be acceptable, please sign below, and return a copy to our office.

Respectfully submitted,

Alfred Benesch & Company

Jonathan D. Wood, PLA
