Research Shows...

Involved fatherhood is often associated with the development of caring and nurturing practices by men toward their children. For fathers, being involved with their children is an "opportunity to develop the sensitive, caring parts of themselves". (Coltrane, 1996, p.117)

Men who invest in their emotional connection to their children, often improve their marital relationships as well. (Carlson & Turner, 2010)

Evidence of the presence of nurturing fathering is the most consistent predictor of gender equality. (Coltrane, 1996)
